EDUCATION

Bachelor of Science, Specialist Program in Computer Science Co-op

Toronto, Canada

University of Toronto

2021 - 2026

EXPERIENCE

Founding Software Engineer

December 2025 – Present

UMA

- Architected and managed the entire **AWS cloud ecosystem** solo, designing the infrastructure to support high-availability production workloads and secure device-to-cloud communication.
- Directed the initial development of the **Admin, Operator, and User web portals**, establishing the core architecture and codebase for the company's entire web suite.
- Engineered a centralized **backend API architecture** to synchronize real-time data across **IoT vending machines** and web interfaces, enabling remote device management.
- Collaborated with hardware engineers to define **data ingestion protocols** and communication pipelines between the hardware fleet and the cloud backend.

Cloud Engineer Co-op

May 2025 - December 2025

HOOPP (Healthcare of Ontario Pension Plan)

- Developed **foundational cloud automation solutions** across AWS and Azure, automating infrastructure provisioning and migrations for nearly **400 virtual machines**.
- Engineered an **Azure DevOps automation pipeline** that reduced a 45-minute manual workflow to **under 5 minutes**, eliminating 100% of manual edits across multiple teams.
- Improved error alert accuracy by over **90%** through automated health checks and custom monitoring workflows for 100+ cloud applications.

Machine Learning Intern

May 2025 - September 2025

Themis AI

- Engineered a **full-stack interactive image segmentation** and classification interface for a high-consequence data-labeling platform.
- Implemented API integrations to fetch and render uncertain images in real-time for continuous model retraining, optimizing the feedback loop between frontend and backend.

Software Engineer, HCI & AI Intern

May 2024 - August 2024

Autodesk Research

- Independently researched and implemented an **end-to-end system** (Next.js, LangChain, React Flow) to help authors visualize stories through automated element extraction.
- Designed and delivered a fully functional web-based prototype, taking full ownership of technical decisions and the resulting full-stack architecture.

Full Stack Engineer Co-op

January 2023 - April 2023

Manulife

- Engineered the backend architecture for an internal dashboard utilizing **Java** and **Spring Boot**, developing robust RESTful APIs to power a **React.js** frontend and improve inter-departmental collaboration.
- Implemented core business logic within the **Spring** ecosystem and automated team workflows using supplementary C and PowerShell scripts, significantly increasing operational efficiency.

PROJECTS

Full-Stack Game Discovery Engine

2025

Steam Oracle (Blue Ocean Games)

- Developed an **LLM-powered search engine** as a technical prototype for a startup to evaluate product feasibility and market direction.
- Built a complete platform using **FastAPI (Python)** and **Next.js**, orchestrating LLM workflows with **LangChain** to enable natural language video game discovery.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C#, C, SQL, PowerShell, GraphQL

Frameworks & Tools: FastApi, Pandas, NumPy, Next.js, React.js, FastAPI, Node.js, Express.js, Spring Boot, Docker, Git

Cloud & Infrastructure: AWS (EC2, S3, Lambda), Azure, CI/CD Pipelines, Jenkins, Linux, MongoDB, PostgreSQL

Software Dev: SDLC, Full-Stack Architecture, RESTful APIs, System Design, Agile, Unit/Integration Testing
